Luis Felipe

PEÑA LOZANO

Software Engineer
Data Engineer| Backend Engineer

PERSONAL PROFILE

Data Engineer (8+ years) specializing in designing and operating cloud data platforms (AWS, GCP, Azure). Build batch and streaming pipelines in Python/SQL/Spark; orchestrate with Airflow/Cloud Composer and Dataform/dbt; integrate data lakes/warehouses (BigQuery, Redshift, Snowflake, Synapse) and messaging/event streaming (Kafka, Pub/Sub, Kinesis) using lakehouse patterns (Delta/Parquet). Led CI/CD and IaC automation (GitHub Actions, Cloud Build, Terraform) with a focus on quality (testing/validation, data contracts), observability and data lineage, security (IAM/KMS), and governance (data catalog, policies)—reducing time-to-insight, optimizing costs, and meeting SLAs. Partner closely with business and cross-functional teams to deliver reliable, scalable, measurable data products.

STUDIES

English - B2

Information Systems Analysis and Development

SENA - (2015 - 2018)
Technologist

Ingeniería de Software

Politécnico Grancolombiano / 2018 - 2021 (2)
Bachelor's Degree

Data Engineering | Data Science | Backend

Platzi — 60+ course certificates completed
In progress

ADDITIONAL STUDIES

(Click each category to view PDF certificates)

- PRODUCTIVITY
- DATA SCIENCE & BI
- PROGRAMMING
- CLOUD COMPUTING

WORK EXPERIENCE

Stefanini Latam

Data Engineer
(01/12/2024 - Present)

- Design and implement scalable cloud data pipelines on Google Cloud (GCP) to integrate structured and unstructured data.
- Build and administer data lakes to enable advanced analytics and machine learning models in an efficient, well-governed manner.
- Optimize and automate ETL/ELT processes, improving load times and reducing compute costs via best practices in partitioning, compression, and performance tuning.
- Implement DevOps and IaC with Git and Terraform, ensuring continuous deployments, version control, and traceability of data assets.
- Collaborate with agile, cross-functional teams (Scrum) on digital transformation initiatives, aligning business requirements with end-to-end data solutions and promoting adoption of quality and security standards.

ADL Digital Lab

Data Engineer
(22/04/2024 - 01/12/2024)

- Design, develop, and implement big data pipelines on AWS and GCP using SQL and Python, optimizing efficiency and scalability.
- Build backend applications and APIs, integrating data models within big data architectures.
- Implement ETL architectures to automate data flows, improving analytics and reporting.
- Manage projects using agile (Scrum) practices, ensuring on-time delivery and adaptability.
- Develop serverless solutions with AWS Lambda, maximizing operational efficiency.
- Administer users and permissions under strict security guidelines and access controls.

SKILLS

- *Excel & Macros VBA*
- *SQL*
- *Java*
- *Python*
- *HTML & CSS*
- *JavaScript*
- *Power BI*
- *GPC (Google Cloud Computing)*
- *Microsoft Azure (Cloud Computing Services)*
- *AWS - (Cloud Computing Services)*
- *GIT*
- *SCRUM*
- *Hadoop*
- *Spark*

WORK EXPERIENCE

Unísono Colombia

Backoffice Analyst (08/02/2016 - 22/07/2019)

- Troubleshoot data-dump/ingestion issues and resolve data inconsistencies.
- Analyze and structure business reports and datasets.
- Administer Access/SQL databases (backups, queries, performance, integrity).

Atento

Back Office / Web Master Jr. (03/11/2019 - 27/07/2020)

- Manage the service desk and update platform information.
- Work with HTML/CSS, JavaScript, MySQL, and SQL Server across staging and production environments.
- Maintain content versioning and governance.
- Build database-driven reports aligned to required metrics/KPIs.
- Analyze website content and messaging for digital communications.

Avvale

Specialist Consultant - Contractor
(27/09/2023- 27/12/2023)

- Design, develop, and deploy data pipelines using Python and PL/SQL, improving efficiency and scalability.
- Implement robust, secure event-driven architectures on AWS.
- Automate cloud ETL pipelines and architectures; manage jobs and deployments.
- Build backend software on serverless architectures with AWS Lambda to deliver scalable, cost-effective solutions.
- Manage projects using agile (Scrum) practices.
- Author detailed technical documentation.

Havas Media Group

Data Engineer - Developer
(07/03/2022- 25/08/2023)

- Design and implement ETL architectures to automate data flows for analytics and reporting.
- Automate workflows in Python and SQL, delivering cloud-native deployments.
- Build reports and dashboards based on marketing and paid media metrics.
- Model databases/data models for analytics and paid media use cases.
- Analyze campaign and customer datasets; define/track KPIs based on business requirements.

Konecta

Data Analyst and Digital Strategy
(16/09/2021- 04/03/2022)

- Automate ETL processes.
- Develop and maintain RPA automations using Python.
- Design and implement ETL architectures for reporting and workforce analytics.
- Design databases based on business requirements.
- Build data pipelines with Python and Excel VBA.
- Create Power BI reports and dashboards.
- Gather and manage requirements from internal and external stakeholders according to need and criticality.

Teleperformance

Data Analyst / Jr. WFM Analyst
(03/08/2020 - 29/06/2021)

- Analyze and structure data and real-time reporting to meet KPIs.
- Build reports and lightweight databases using Excel/VBA.
- Automate data management and update cycles with VBA.
- Define KPIs and reporting for internal and external stakeholders.
- Analyze campaign performance against client-defined parameters.
- Develop forecasting for workload and staffing needs (workforce planning).
- Implement continuous KPI improvements and reporting enhancements.
